Wireless network cable identification

BRADY®

Well identified cables speed up cable installation, maintenance and troubleshooting. They help keep 5G and other wireless networks fully operational.

How do you identify cables?

Our wireless network identification solutions take cable id to new heights with reliable, industry-approved and weather-resistant tags that can be printed easily, wherever you are.

1 ### Industry-approved cable tags

Our UV-, weather-resistant and industry-approved low smoke zero halogen tags can keep any cable identified in support of your wireless network.

2 ### Print wherever you are

Easily source data to create a compliant cable tag, with your phone. Print it on our pocket size label printers to immediately identify anonymous cables.

3 ### Large volumes, instantly

Alternatively, print huge volumes of tags in the office with our quality benchtop label printers. Or get them on call from the nearest Brady stock.
